## Outline

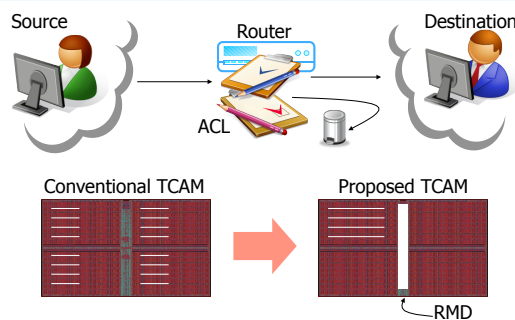

- Introduction
  - Access Control List (ACL)
  - Ternary Content Addressable Memory (TCAM)
  - Prefix Expansion
- Proposal & Contribution
  - Range Matching Device (RMD)
  - Optimization of Prefix Expansion (PE-MIN)
  - Managing TCAM (RMD + PE-MIN)
- Evaluation
- Conclusion

## Sketch of Proposal

May 16, 2008

High Performance Switching and Routing

3

## Access Control List (ACL)

```
access-list 101 permit tcp host 10.1.1.2 host 172.16.1.1 eq telnet
access-list 102 deny tcp any range 137 139 any
access-list 101 permit ip 10.1.1.0 0.0.0.255 172.16.1.0 0.0.0.255
access-list 111 deny icmp any 10.1.1.0 0.0.0.255 echo
access-list 191 permit udp any any range 16384 16483
```

- List in routers for packet classification (permit/deny)
- Entries consist of source and destination IP address, source and destination port number, and protocol number
- Storage in TCAM

May 16, 2008

High Performance Switching and Routing

4

## Ternary CAM

- Searches using the content of memory, returns the memory address
- Cell representation: 0 / 1 / \*

### Cons

- High power consumption
- Large chip area
- Expensive inter chip communication cost

### Pros

- **Fast search speed**
- Excellent performance in longest prefix match
- Simple and standardized structure

May 16, 2008

High Performance Switching and Routing

5

## Motivation

- Writing ACL in TCAM
  - Issue of expressing port numbers in ranges
  - Q. How do we write "ranges" in memory?
  - Q. How do we restrain the growth of expensive TCAM entry?
- Possible storage of ranges
  - Full expansion: writing every single number to exactly match the entire range
  - Prefix expansion: writing least significant bits as don't care bits

May 16, 2008

High Performance Switching and Routing

6

### Introduction

## Example Prefix Expansion

- For a port range of "1024 ~ 65535",
  - Full Expansion: 64512 entries
  - Prefix Expansion: 6 entries

1*****	32768 - 65535
01*****	16384 - 32767
001*****	8192 - 16383
0001*****	4096 - 8191
00001*****	2048 - 4095
000001*****	1024 - 2047

Good performance of ranges in units of 2<sup>i</sup>

- For a port range of "16385 ~ 65534",
  - Full Expansion: 49150 entries
  - Prefix Expansion: 29 entries

May 16, 2008 High Performance Switching and Routing 7

## Research Purpose

- Minimize memory usage by integrating additional device within the TCAM
- Decrease worst case by optimizing prefix expansion algorithm

↓

Reduce TCAM's memory consumption by using Range Matching Device and optimized prefix expansion

May 16, 2008 High Performance Switching and Routing 8

### Proposal

## Range Matching Device (RMD)

Conventional TCAM					Bits added for RMD			
SRC IP (32)	DST IP (32)	SRC Port (16)	DST Port (16)	Prot (8)	1	*	*	*
					*	1	*	*
					*	*	1	*
					*	*	*	1
					*	*	*	*

HIT

Port Range FROM ~ TO in RMD :  
Search Key : 2436

- Additional bits to the conventional TCAM, reserved to express pre-written ranges

May 16, 2008 High Performance Switching and Routing 9

### Proposal

## Logical Circuit of RMD

From [15:0] To [15:0] Load Enable

**<Input>**  
• Src/Dst Port  
• FROM  
• TO

**<Compare>**  
Determine if  $FROM \leq search\ key \leq TO$

**<Output>**  
Match/Non-match

Search Line

- Write the range FROM ~ TO in the memory
- Determine if the search key (port #) is within FROM ~ TO

May 16, 2008 High Performance Switching and Routing 10

### Proposal Background

## Prefix Expansion Algorithms

Prefix expansion of range "5000 ~ 6000"

- PE-OR: Conventional prefix expansion

<sup>A</sup>5000-5007   <sup>B</sup>5008-5023   <sup>C</sup>5024-5055   <sup>D</sup>5056-5119   <sup>E</sup>5120-5631   <sup>F</sup>5632-5887   <sup>G</sup>5888-5951   <sup>H</sup>5952-5983   <sup>I</sup>5984-5999   <sup>J</sup>6000

A B V C V D V E V F V G V H V I V J

- PE-MIN: Proposed prefix expansion

<sup>A</sup>4992-5119   <sup>B</sup>5120-6143

<sup>C</sup>4992-4999   <sup>D</sup>5120   <sup>E</sup>6000   <sup>F</sup>6000-6015   <sup>G</sup>6016-6143

$(A \vee B) \wedge (\neg C \wedge \neg D \wedge \neg E) \vee F$

May 16, 2008 High Performance Switching and Routing 11

### Proposal

## Logical NOT/AND Gates in TCAM

- Logical gates are required in addition to the conventional TCAM to express the result of PE-MIN
- Gain: Tradeoff between the additional gates and the reduced line

May 16, 2008 High Performance Switching and Routing 12

## RMD Policy Proposal

- Weight of each range determines the order to be written in the RMD  
(Lines after PE - 1) x (Number of ACLs referring this range)

Range	PE-MIN lines	# of Ranges	PE-MIN x # of Ranges	Weight
2326 ~ 2837	8	16	128	112
6970 ~ 6999	4	18	72	54
5555 ~ 6555	10	6	60	54
5555 ~ 5587	5	11	55	44
3230 ~ 3253	4	14	56	42

May 16, 2008 High Performance Switching and Routing 13

## Entry Reduction using RMD Evaluation

PE-MIN with Range Matching Device

PE-OR with Range Matching Device

- PE-MIN: 50% of reduction with 10~11 RMDs
- PE-OR: 50% of reduction with 7 RMDs
- With only 2~3 additional RMDs, the reduction level of PE-MIN can be achieved in case of PE-OR

May 16, 2008 High Performance Switching and Routing 14

## Overhead Cost Estimation 1 Evaluation

<TCAM VLSI in 90nm Technology>

Control Logic :  
GLUE + ColDrv = 8%  
305K Gates (Priori)

RMD: 580 Gates x 20 RMDs = 11.6K Gates  
Current TCAM : TCAM with RMD = 100 : 100.3

- Inserting 20 RMD to current TCAM  
⇒ 0.3% increase in manufacturing cost

May 16, 2008 High Performance Switching and Routing 15

## Overhead Cost Estimation 2 Evaluation

Ex.  
Data bits: 576  
RMDs : 11  
→ Saves 170Kbit  
(Around 300 entries, 30% reduction)

- Tradeoff in vertical and horizontal bit lengths
- Gain/loss tradeoff depends on data bit length

May 16, 2008 High Performance Switching and Routing 16

## Conclusion & Future Work

- Proposed new TCAM architecture by integrating Range Matching Device and using optimized prefix expansion algorithm
- Evaluated using actual ACL data
- Future work
  - Analysis of the proposed method using other ACLs to achieve a general purpose TCAM
  - Implementation of the proposed TCAM in the network processor to investigate further performance characteristics (i.e. power consumption)
